

1 ABSTRACT OF THE DISCLOSURE

2  
3 An apparatus for indicating an ice fishing tip-up strike or mark trails in low light  
4 conditions by a flashing light source located on extreme end of apparatus includes a tilt  
5 switch to determine whether flag arm is in horizontal or vertical position. A reflective  
6 enclosure of the tilt switch/flashing light source is used to protect the electrical  
7 connections of conductors, tilt switch and flashing light source. Conductors connect the  
8 power source via a jack/socket junction to apply and disconnect power from the flashing  
9 light source. The apparatus is attached to a flag arm of existing known fishing devices.
